## Computing

Children at Pudsey Bolton Royd must begin to develop the skills necessary for them to become integral parts of an evermore digital world.

This includes:

- becoming digitally literate in a variety of programmes;
- developing the ingenuity to apply these skills and approach new, and unfamiliar, programmes;
- using logical thinking and analytical skills to achieve specific goals, including ones within the remit of coding;
- and use resilience and perseverance when solving problems and evaluate their efforts, understanding evaluation is not the end of the process but part of a continual cycle.

As they thrive in these skills, children at Pudsey Bolton Royd must also develop the ability to be responsible and competent, consequently ensuring their chances of safety and success in the wider digital world.
